

SkyLine/SkyBest

Seeking applications for the following full-time position:

Engineering Manager in West Jefferson. Supervises the activities of the Engineering Department related to the build out, installation and maintenance of SkyLine's Switching, Routing, ROADM, SONET, TDM, IP and Video networks. Performs engineering functions for the installation of equipment in the Central Offices and remotes. Helps generate and maintain records for central office equipment and monitor equipment capacity requirements. Stays current with regards to new technologies and helps determine how these technologies may be used in order to maintain the integrity of SkyLine's network going forward. Displays a positive attitude and promotes a respectable company image when attending special events and when dealing with SkyLine's members.

A four-year degree is required, preferably in engineering or electronics. Other degrees will be considered if employee has five years' experience in the electronics area of telecommunications. Employee must successfully complete/attain the following courses and certifications: Cisco CCNA (minimum. CCIE or CCNP preferred), Juniper Junos Routing & Switching courses, Calix Education Courses, Ribbon C15 training, Centina NOC training along with training on new equipment as it arises. Employee should be well versed in routing fundamentals and protocols including BGP, MPLS, OSPF, RIP, IPv4, LAG, IGRP, IGMP, VLAN's, etc. Employee must have a solid understanding of binary calculations and subnetting practices.

Please complete an employment application by 5:00 pm, June 30, 2022.
